Project FUSION

ITT evaluation criteria – indicative DRAFT

In December 2020 Project FUSION plans to issue an Invitation to Tender (ITT) for the provision of flexibility services in East Fife. Details of these required services are presented in the Flexibility Services Request (FSR), available on the [FUSION website](#).

Responses to the ITT will be evaluated competitively in terms of their overall value for money.

SPEN will publish a detailed version of the evaluation criteria prior to publishing the ITT but in the meantime this interim communication is intended to provide prospective participants with an indication of the types of criterion that will feature in that evaluation process.

Value for money will be determined primarily by considering the **cost** for delivering the specified availability. The units for comparison will be '**£/kWh/Prosumer**'.

A secondary factor in the evaluation will also consider the extent to which bids contribute towards **FUSION's learning objectives**, including:

- Participation of flexibility from the **residential** sector
- Participation of flexibility from the **transport** sector

More details on the evaluation criteria to be employed will be published in due course.
