

WATCH OUT! THERE'S A CABLE ABOUT!

Follow the advice in HSE Guidance Note HSG47
'Avoiding Danger from Underground Services'

REMEMBER

Houses, offices, shops, factories and street furniture all have electric cables supplying them.

CHECK PLANS

Ensure current cable records are on site.

Carry out a risk assessment in accordance with HSG47.

Be aware that not all cables are shown on plans.

USE CABLE LOCATORS

Before every use of CAT and Genny make sure they are calibrated and working properly.

Check plans by tracing cables and marking their position using paint, crayon, chalk or pegs.

Always scan the area you intend to excavate before you start to dig.

NOW DIG SAFELY

Hand-dig trial holes to find the exact position of cables **before** you use a mechanical excavator.

Be aware that cables can be found at any depth, even just below the surface.

If you find a cable embedded in concrete **do not** attempt to break it out. Contact us to ensure it is de-energised.

If you cannot find cables shown on the plan contact us. **Never assume** they are not there.

If you damage a cable, vacate the excavation and phone our emergency number immediately. Keep everybody clear.
